

Team Meeting - Oct 29, 2024

Attendees

- Present: Terry, Jaeyong, Kevin, Danny, Morris, Sam
- Absent: Daria, unable to make it

Discussion items

- Main purpose of this call is to merge the 3 subteam branches into the main branch of our project while addressing any merge conflicts
 - Each team will make a PR into the main branch, conflicts will be reviewed by at least one other team member.
- Then, we will discuss how to move forward with the project and ramp up development as D3 is due on November 12th.

How we'll move forward

We need a very minimal MVP to submit for D3 on Nov 12 - the most basic, working version of Caspr. We should decide what this looks like for us.

- Continue roughly working in the subteam format until we are all ready to work on the graph / data visualization aspect of the app
- Make better use of the Trello board - Sam?
- Start to integrate Mon, Wed, Fri standup messages in this format
 - Mon Oct 28: worked on this, continuing this, doing this next, etc.
 - It's fine to have no major updates, just say so
- More frequent team meetings? Once a week? Mondays 5pm? Also more frequent meetings where not everyone participates
- Must prioritize smaller things - from D3 handout:
 - Lastly, there were some qualitative aspects of software development that may have been deprioritised in D2 in the interest of kickstarting your project. These aspects, such as code quality, documentation, UI design (if applicable), ease of deployment, etc. will be in focus during this deliverable.
 - Also need a more complete main README

Immediate Todos for D3 MVP

- **Everybody get familiar with the main branch code - especially other people's code**

- Figure out our testing set up
- Subteam 1 and 3 - decide a main page to keep and agree on database setup for storing files
- Graph sharing functionality between users - allowing viewing
- Link subteam 2's graph view to subteam 1 and 3's work
- **Start stand-up messages this Friday Nov 1**
