- ☑ Clarify login process - Sam's question/idea
- ☑ Set up regular meeting time with partner

Useful Links

- [Lucid chart architecture diagram](#)
- [Figma preliminary UI design](#)

Notes

Figma feedback
- Google credentials would be convenient (nice to have) but email + password for sure
- Login page - no major feedback, looks good
- Mockup as a whole - makes sense
- Search page
  - Search for something in the search bar. Separate search results page needed
  - Search page with results (separate page), google-like
  - Add this type of search to user stories

Architecture Diagram feedback (Lucid Chart)
- No major feedback, looks good for now.

RBAC - Recommendations for Implementation details
- They don't have experience with this, must learn on our own

- Given permission to exclude RBAC from MVP. Can be implemented later if there is time. The visualization part is more important!

General Notes
- Our priority at this point will be data visualization -> being able to have the client visualize their uploaded data. Build this first, cool user/RBAC features come later.
  - Prioritize client. Mock a lot of API calls in the beginning first.

Next Meeting Details
- When2Meet created to decide on short weekly meeting date w/ Sheldon and Yuchen to provide updates and ask questions
